this major macroeconomics text by robert barro and vittorio grilli is written from a european perspective it adopts an open economy approach and incorporates full treatment of european labour and financial institutions and markets and covers the main macroeconomic theories and policy in relation to the components of the macroeconomic environment

this paper discusses the common agricultural policy of the european union from a macroeconomic perspective this approach is based on recent empirical evidence from various sources indicating that the cost of present agricultural protection in europe to consumers and taxpayers in terms of welfare lost and of output foregone is higher than has been commonly understood this conclusion is supported by assessing the cost of farm protection by simple general equilibrium analysis that reflects the implicit discrimination involved against manufacturing trade and services in europe whereas short run partial equilibrium studies have generally indicated deadweight losses due to farm support equivalent to about 1 percent of gdp on average long run general equilibrium considerations are shown to raise the loss estimates to about 3 percent of gdp by lowering costs and prices freer farm trade could deliver a substantial long run supply side boost to the european economy and to the world economy as a whole facilitating a noninflationary decrease in interest rates and unemployment in western europe and possibly also paving the way for export led growth in central and eastern europe in the years ahead even so there may remain a cultural justification for continued public support for agriculture in europe if so such support needs to be made more effective and more efficient than it is now

this comprehensive and far reaching book describes the growth and economic integration of the european economy from 1500 to 1913 the authors apply macroeconomic techniques to identify growth rates inflation product markets trade networks and business cycles across a set of countries over the period the book demonstrates that growth was the natural state for european economies throughout the period although under the impetus of the industrial revolution growth rates generally accelerated by the end of the nineteenth century similarly business cycles in the modern sense seem to have been in evidence at the beginning of the period but by the eighteenth century there is no doubt that modern cycles affected these countries sometimes simultaneously inflationary episodes are both distinct and shared in this long period with the long inflation of the sixteenth century attesting to the integration of european markets finally the authors find abundant quantitative evidence to support the argument that economies linked by international trade in 1500 came close to achieving global integration by 1913 the european macroeconomy will be of interest to scholars of economic history international economics and macroeconomics
